

A Comprehensive Analysis Of Financial Performance: Insights From A Leading Banks

Category: Data Analytics With Tableau

Skills Required: **Tableau**

Project Description:

The banking industry world-wide is being transformed. The global forces for change include technological innovation; the deregulation of financial services at the national level and opening-up to international competition; and - equally important - changes in corporate behavior, such as growing disintermediation and increased emphasis on shareholder value. In addition, recent banking crises in Asia and Latin America have accentuated these pressures. The banking industries in central Europe and Latin America have also been transformed as a result of privatizations of state-owned banks that had dominated their banking systems in the past. In this project we are trying to analysis the bank related data and able to extract some insights from the data using Business Intelligence tools. To Extract the Insights from the data and put the data in the form of visualizations, Dashboards and Story we employed Tableau tool.

Define problem/Problem understanding

In this milestone, We will go through the problem understanding

- Specify The Business Problem

Duration: 1hrs

Skill Tags:

The banking industry world-wide is being transformed. The global forces for change include technological innovation; the deregulation of financial services at the national level and opening-up to international competition; and - equally important - changes in corporate behavior, such as growing disintermediation and increased emphasis on shareholder value. In addition, recent banking crises in Asia and Latin America have accentuated these pressures. The banking industries in central Europe and Latin America have also been transformed as a result of privatizations of state-owned banks that had dominated their banking systems in the past. In this project we are trying to analysis the bank related data and able to extract some insights from the data using Business Intelligence tools. To Extract the Insights from the data and put the data in the form of visualizations, Dashboards and Story we employed Tableau tool.

- Business Requirements

Duration:1hrs

Skill Tags:

The business requirements for analyzing the performance and efficiency of banks in world include identifying KPIs, comparing performance across different countries and states, identifying patterns and trends over time, identifying affecting factors, creating interactive dashboards and reports, identifying areas for improvement, making data-driven decisions, comparing to the industry average and creating forecasting models for future performance. The ultimate goal is to gain insights and improve performance through data visualization techniques.

- Literature Survey

Duration:1hrs

Skill Tags:

A literature survey for the financial analysis of banks would involve researching and reviewing previous studies, articles, and reports on the topic. This could include information on the methods and techniques used for financial analysis of banks, as well as the results and conclusions of these studies. Some potential areas of focus for a literature survey on financial analysis of banks could include:

Ratio analysis, which involves comparing different financial metrics (such as return on assets, return on equity, etc.) to assess a bank's performance and compare it to industry averages or other benchmarks.

Stress testing, which involves simulating adverse economic scenarios to evaluate a bank's ability to withstand financial shocks.

Risk management, which involves identifying, assessing, and mitigating the various risks facing a bank, such as credit risk, market risk, and operational risk.

Basel III, which is a set of international regulatory standards for banks that includes measures for capital adequacy, liquidity, and leverage.

- Social Or Business Impact

Duration:1hrs

Skill Tags:

Social Impact: Financial analysis of banks can have a significant social impact by identifying areas where the bank's operations or lending practices may be causing harm to vulnerable communities or perpetuating inequality. For example, a financial analysis might reveal that a bank is heavily invested in

fossil fuel companies, contributing to climate change, or that the bank is disproportionately denying loans to minority-owned businesses, perpetuating economic discrimination.

Business Model/Impact: Financial analysis of banks can have a significant impact on the business operations of the bank itself and its competitors. For example, a financial analysis can help the bank identify areas where it is underperforming compared to its peers, such as in terms of profitability or asset quality. This information can then be used to develop strategies for improving the bank's performance, such as by reducing costs, increasing revenue, or improving risk management practices.

○ Data Collection & Extraction From Database

Data collection is the process of gathering and measuring information on variables of interest, in an established systematic fashion that enables one to answer stated research questions, test hypotheses, evaluate outcomes and generate insights from the data.

Data Preparation

In this milestone, we will go through the data preparation.

- Prepare The Data For Visualization

Duration:1hrs

Skill Tags:

Preparing the data for visualization involves cleaning the data to remove irrelevant or missing data, transforming the data into a format that can be easily visualized, exploring the data to identify patterns and trends, filtering the data to focus on specific subsets of data, preparing the data for visualization

software, and ensuring the data is accurate and complete. This process helps to make the data easily understandable and ready for creating visualizations to gain insights into the performance and efficiency.

○Data Visualization

Data visualization is the process of creating graphical representations of data to help people understand and explore the information. The goal of data visualization is to make complex data sets more accessible, intuitive, and easier to interpret. By using visual elements such as charts, graphs, and maps, data visualizations can help people quickly identify patterns, trends, and outliers in the data.

▪No Of Unique Visualizations

Duration:1hrs

Skill Tags:

The number of unique visualizations that can be created with a given dataset. Some common types of visualizations that can be used to analyze the performance and efficiency of banks include bar charts, line charts, heat maps, scatter plots, pie charts, Maps etc. These visualizations can be used to compare performance, track changes over time, show distribution, and relationships between variables, breakdown of revenue and customer demographics, workload, resource allocation and location of banks.

▪Top Banks According Rank And Assets

Duration:1hrs

Dashboard

A dashboard is a graphical user interface (GUI) that displays information and data in an organized, easy-to-read format. Dashboards are often used to provide real-time monitoring and analysis of data and are typically designed for a specific purpose or use case. Dashboards can be used in a variety of settings, such as business, finance, manufacturing, healthcare, and many other industries. They can be used to track key performance indicators (KPIs), monitor performance metrics, and display data in the form of charts, graphs, and tables.

- Responsive And Design Of Dashboard

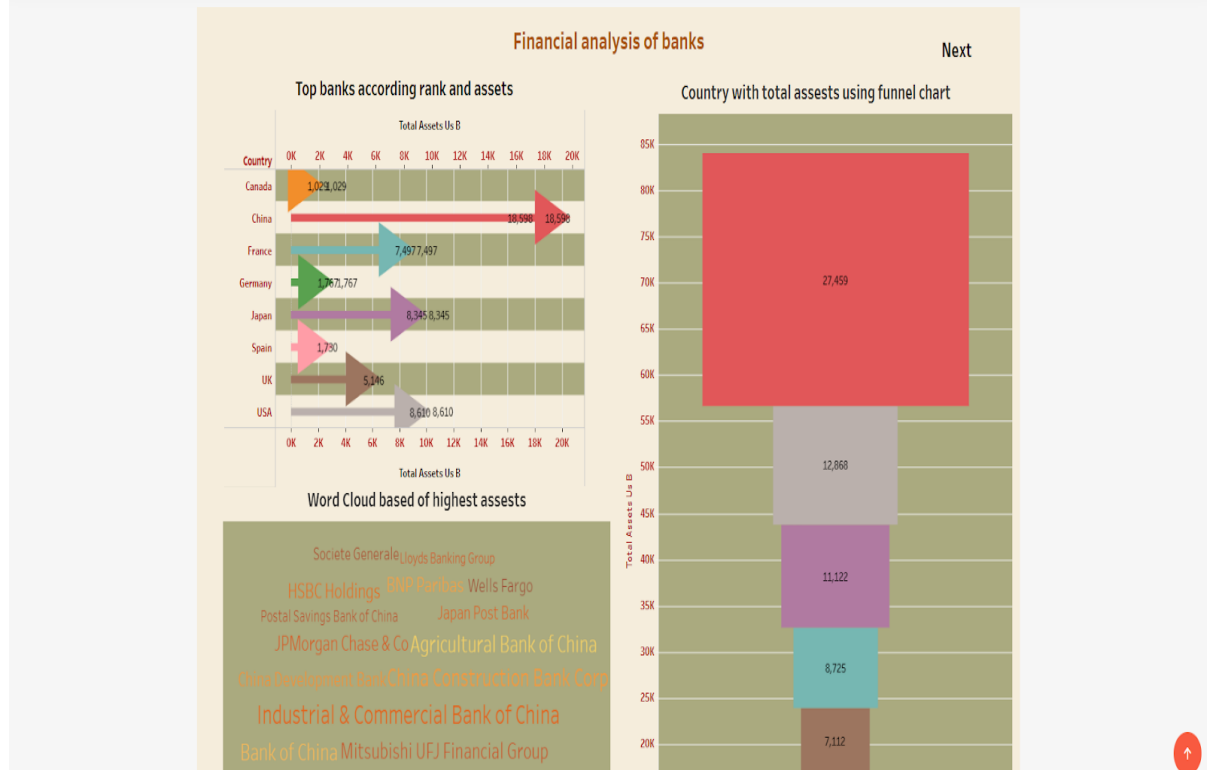

Duration:1hrs

Skill Tags:

Once you have created views on different sheets in Tableau, you can pull them into a dashboard.

https://drive.google.com/file/d/1hhFpcwXXxjuUnyuTm-E3eMKdx4ha1DJm/view?usp=share_link

Story

A data story is a way of presenting data and analysis in a narrative format, intending to make the information more engaging and easier to understand. A data story typically includes a clear introduction that sets the stage and explains the context for the data, a body that presents the data and analysis logically and systematically, and a conclusion that summarizes the key findings and highlights their implications. Data stories can be told using a variety of mediums, such as reports, presentations, interactive visualizations, and videos.

▪No Of Scenes Of Story

Duration:1hrs

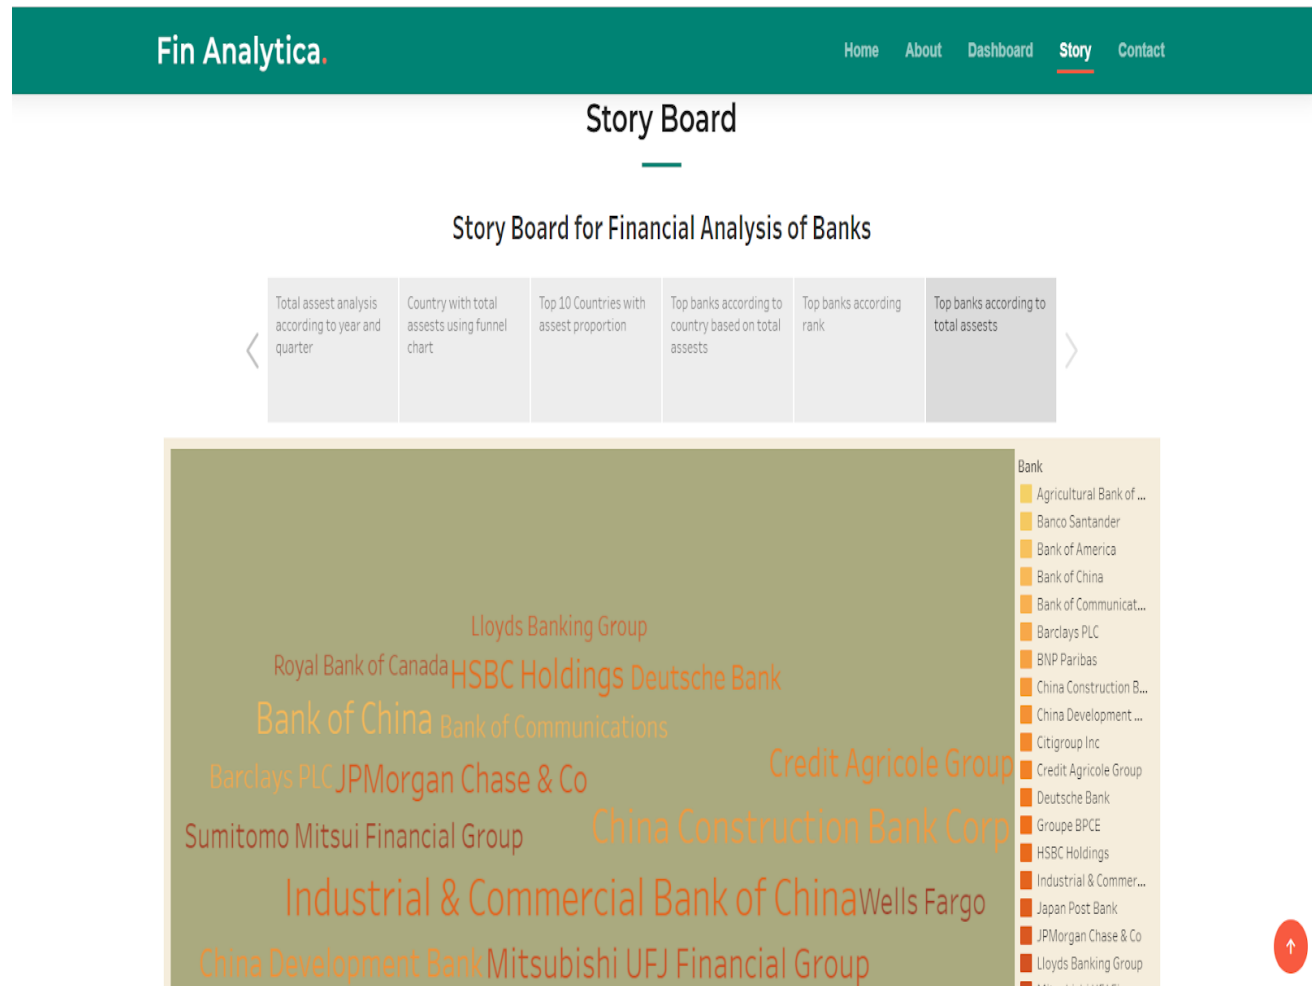

Skill Tags:

The number of scenes in a storyboard for a data visualization analysis of the performance of banks will depend on the complexity of the analysis and the specific insights that are trying to be conveyed. A

storyboard is a visual representation of the data analysis process and it breaks down the analysis into a series of steps or scenes.

Performance Testing

In this milestone, we will go through the performance testing.

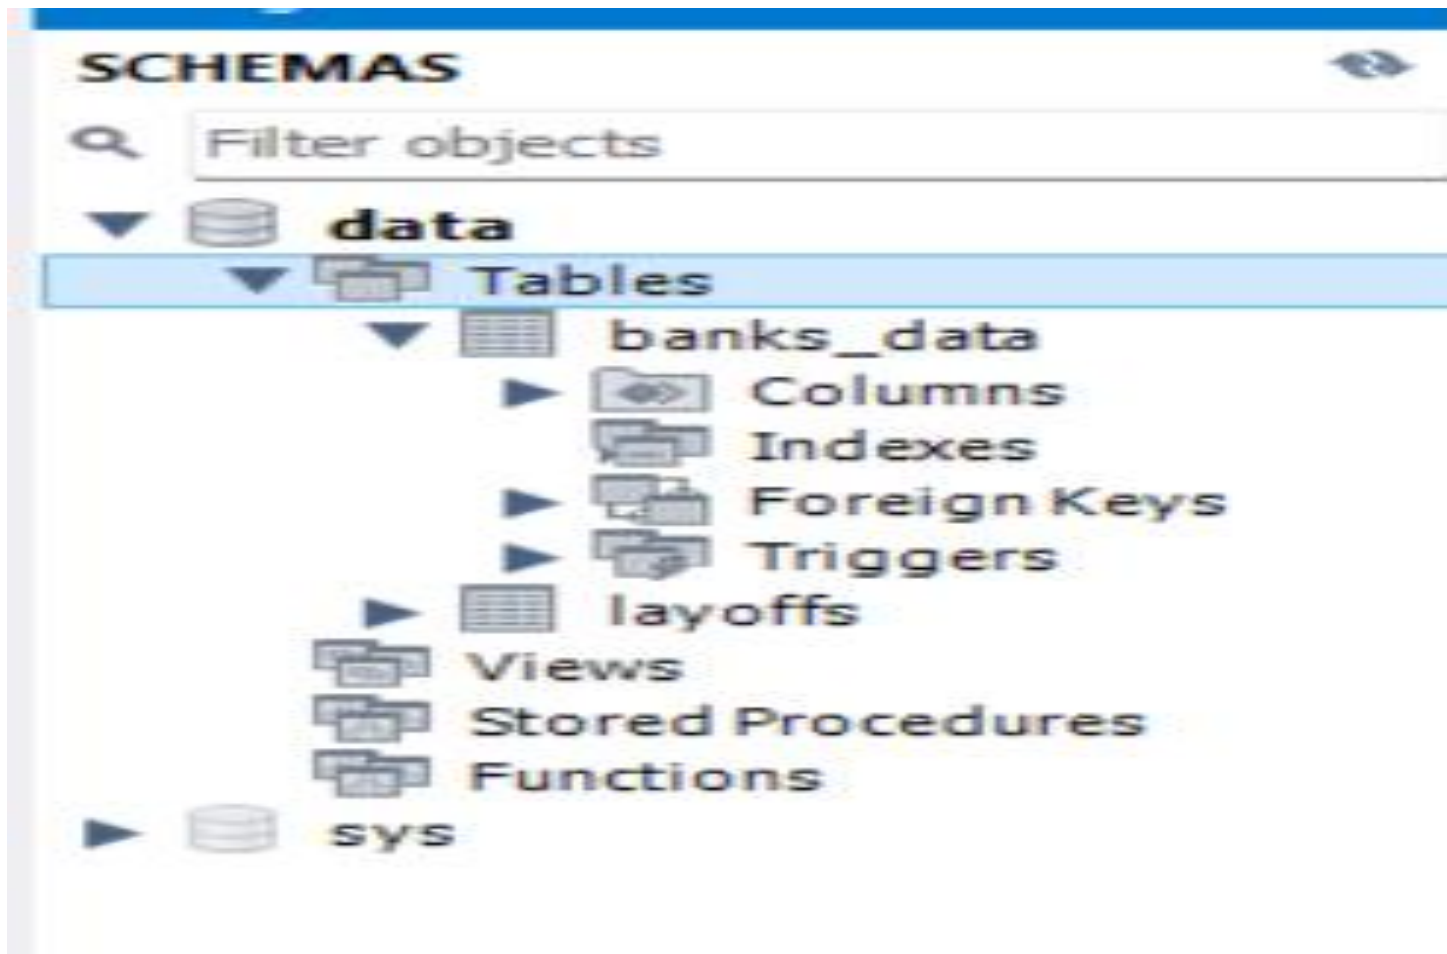

- Amount Of Data Rendered To DB

Duration:1hrs

Skill Tags:

The amount of data that is rendered to a database depends on the size of the dataset and the capacity of the database to store and retrieve data.

Open the MySQL Workbench, go to the database then click to expand the tables,select the table and click on (i) button to get the information related to table such as column count,table rows etc.

Duration: 1 Hrs

Skill Tags:

- 1.Top banks according rank and assets
- 2.Top banks according to total assets
- 3.Top banks according to country based on total assets
- 4.Top 10 Countries with assets proportion
- 5.Country with total assets using funnel chart in increasing order
- 6.Total assets analysis according to year and quarter

Web Integration

Publishing helps us to track and monitor key performance metrics and to communicate results and progress. help a publisher stay informed, make better decisions, and communicate their performance to others.

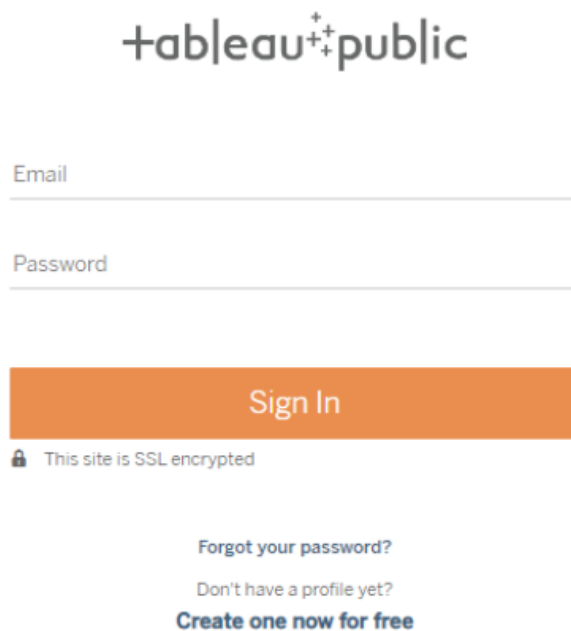

Publishing dashboard and reports to tableau public

Step 1: Go to Dashboard/story, click on the share button on the top ribbon

The screenshot shows a dialog box titled "Share via Tableau Server or Tableau Cloud" with a close button (X) in the top right corner. Below the title bar, there is a text input field labeled "Server:" containing the URL "https://public.tableau.com" and a dropdown arrow. Below the input field are two buttons: "Connect" and "Cancel". Underneath these buttons, the text "Quick Connect" is displayed, followed by the link "Tableau Cloud" in blue. At the bottom of the dialog, there is a message: "Don't have a Tableau Server or Tableau Cloud account? Quickly create a Tableau Cloud site to share your work." and a button labeled "Create Site >>".

Step 2: Once you click on connect it will ask you for the tableau public username and password

The image shows the Tableau Public login interface. At the top is the Tableau Public logo, which consists of a plus sign followed by the word 'tableau' and another plus sign followed by the word 'public'. Below the logo are two input fields: 'Email' and 'Password'. Below these fields is a large orange button labeled 'Sign In'. Under the 'Sign In' button, there is a small lock icon and the text 'This site is SSL encrypted'. At the bottom of the form, there are three links: 'Forgot your password?', 'Don't have a profile yet?', and 'Create one now for free'.

Once you login into your tableau public using the credentials, the particular visualization will be published into the tableau public

Note: While publishing the visualization to the public, the respective sheet will get published when you click on the share option.

▪Embed Dashboard & Story With Web Bootstrap

Duration: 1 Hrs
